

Reviewed by Team Pippin

Title/Formatting: Consider mentioning your team name or KloudBook on the title page because doing so would add some credibility/help clarify what this is a part of.

Consider adding page numbers as well.

Kloud**B**ook not Kloud**b**ook

There is nothing for when a person forgets their password.

Unit Testing comments:

Putting figures next to the appropriate unit tests would make things easier to visualize.

UT4: A new URL for every selection (I'm talking about how you handle groups page and selection) is a lot of parsing.

UT5: get rid of additional "Step 3 fields". Typo, or additional page for step 3? Also, 1, 2, 3, 4, 4, 5

Integration Testing comments:

IT4: Add Friend should now take an ACCESS\_json (we are making it).

IT6: typo

IT7: In your pictures, you make a clear distinction between My Contacts and My Groups. What you seem to be asking for is that in My Contacts, you want to display groups in there too, which partially voids the purpose of My Groups.

Are IT11 and IT12 the same?

IT17: Still working on Notifications. Check on the API folder over the next few weeks before LLD final draft.

Acceptance Testing comments:

Any tests for reactivating?

WG7: 3. Click on Browning Duncan

#### 4. Delete???

WG9: Cannot search for groups.

ANC3: Font change?

CDI3: 5 should be "Instructions"

Diagrams: Label which diagram is for which platform
